# BYE BYE UNDER-EYE

As we age, our facial volume decreases. This can make facial features such as under eye bags appear more pronounced. Additionally, factors such as genetics, allergies, and sleep habits can affect the appearance of our under-eyes. While using concealer can help to mask under-eye hollows, the shadow created by the sunken tear troughs cannot be masked with makeup. This can give a tired, aged appearance to the face even in patients who are young and full of energy.

The tear troughs can be complicated to treat as there are multiple issues to consider such as volume loss, discoloration, and fine lines. As such, we have found that a multi-dimensional approach gives the best improvement.

## Bye Bye Under-Eye Package:

- **1 syringe of Volbella**

*This is our go-to hyaluronic acid filler for treating tear troughs, perfect for creating a smooth transition between the tear troughs and upper cheeks.*

- **3 PRF treatments/injections**

*Created from the patient's blood on the day of the treatment, contains high concentrations of growth factors - improves tone, texture, and pigmentation.*

- **1 bottle of Neocutis Lumière eye cream**

*Uses growth factors to reduce the fine lines and wrinkles of the under eyes and crow's feet. It also helps to brighten, minimize puffiness, and hydrate the delicate skin under the eyes.*

*Actual package results*
