

IV THERAPY

Surgery Recovery

\$170

Vitamin C • Magnesium • Zinc

This IV treatment is offered to patients recovering from recent surgery. Vitamin C or Ascorbic acid is responsible for growth, development and repair of tissues in the body. It also participates in collagen formation. Magnesium is a cofactor in many enzyme systems in the body. It aids in protein synthesis for tissue repair and is involved in muscle and nerve function. Zinc is needed for repair and function of the body. It helps with immune function and tissue repair.

Exercise Recovery

\$170

Glutathione • Vitamin C • Magnesium

This treatment is designed to aid in tissue repair and recovery after exercise. Glutathione is a powerful antioxidant. It is considered the master antioxidant by neutralizing free radicals that cause inflammatory damage and is involved in the protein synthesis that is essential for tissue repair after exercise. Vitamin C or Ascorbic acid is responsible for growth, development and repair of tissues in the body. It also participates in collagen formation. Magnesium is a cofactor in many enzyme systems in the body. It aids in protein synthesis for tissue repair and is involved in muscle and nerve function.

Immune Booster

\$160

Vitamin C • Zinc

This treatment is designed to augment the immune system and promote tissue repair and regeneration. Vitamin C or Ascorbic acid is responsible for growth, development and repair of tissues in the body. It also participates in collagen formation. Certain immune cells use vitamin C to augment their function. Zinc is needed for repair and function of the body. It helps with immune function and tissue repair.

Skin Restoration/Protection

\$160

Vitamin C • Glutathione • Selenium

This treatment is designed to minimize the inflammatory damage caused by free radicals and to promote skin tissue repair and protection. Vitamin C or Ascorbic acid is responsible for growth, development and repair of tissues in the body. It also participates in collagen formation. Glutathione is a powerful antioxidant and skin tightener. It is considered the master antioxidant by neutralizing free radicals that cause inflammatory damage to the skin. It is effective in minimizing age spots, wrinkles and melasma. Selenium increases immunity and defends the body against free radical damage and inflammation.

IV THERAPY

Energy Boost/Weight Loss

\$160

MIC • Glutathione • B Complex*

**Methione, Inositol, Choline*

This treatment is designed to increase fat breakdown and improve the metabolism. Methionine helps the liver maintain the optimal ability to process fatty acids; Choline stimulates the mobilization of fatty acids and prevents their deposition in a given part of the body. Inositol aids in the transport of fat into and out of the liver and intestinal cells, acts synergistically with choline, exhibiting more lipotropic (fat binding) activity than when administered alone.

Glutathione is a powerful antioxidant. It is considered the master antioxidant by neutralizing free radicals. B complex (Riboflavin) helps the body break down and use carbohydrates and fats. It helps metabolize food into energy and helps keep the lining of the gut healthy.

Anti Aging

\$170

Vitamin C • Magnesium • Glutathione

This treatment is designed to slow down the aging of the skin that is created by free radical damage. It is also designed to augment tissue repair and regeneration. Vitamin C or Ascorbic acid is responsible for growth, development and repair of tissues in the body. It also participates in collagen formation. Magnesium is a cofactor in many enzyme systems in the body. It aids in protein synthesis for tissue repair and is involved in muscle and nerve function. Glutathione is a powerful antioxidant and skin tightener. It is considered the master antioxidant by neutralizing free radicals that cause inflammatory damage to the skin. It is effective in minimizing age spots, wrinkles and melasma.
