

ULTHERAPY

Ultherapy is the only FDA-approved nonsurgical treatment that lifts and tightens muscle and skin. This treatment also stimulates the production of collagen and elastin. The only nonsurgical treatment that can visualize and bypass the skin to reach the deeper tissues is Ultherapy, resulting in a more youthful and tightened face, neck, and chest.

BENEFITS

- No downtime
- Non-invasive
- No toxins or fillers
- Treats all areas of the face, neck, and chest
- Results are visible in as soon as 3 months, and continues to improve up to 6 months
- Collagen and elastin production
- Safe procedure
- Customizable

ULTHERAPY TREATMENTS

All treatments can be combined and customized!

BROW

Ultherapy of the brows includes upper and lower eyelids, as well as the crows feet. This procedure is intended to elevate the eyebrows to a more youthful position and to give the eyes a more open and rested appearance.

LOWER FACE

The treatment of the lower face includes the cheeks, jawline, and submental areas. This procedure will tighten and lift the cheeks and jawline, helping to improve the visibility of jowls and heaviness in the nasolabial folds and marionettes lines.

NECK

Many procedures, including fillers, can help camouflage aging signs of the face, but not the neck. Ultherapy of the neck includes the jawline for a more complete result. This procedure will target the mild to moderate neck bands and the fullness in the submental area resulting in a more youthful appearance.

LIPS

Ultherapy of the lips is meant to treat the static lines visible around the lips. By restoring collagen and elastin to this area, the lips will appear more youthful and advanced. This procedure consists of three treatments, each one month apart from the other.

CHEST

The décolletage is the area of the chest visible when wearing a low cut top. This treatment will reverse the signs of aging by reducing the visibility of lines in the chest, while also toning, tightening, and lifting the skin. This creates a more smooth décolletage.
